Food Delivery Platform - Updated Scope of Platform

Client Name: Nael Mattar
Platform Type: Mobile & Web-Based Food Delivery Platform
Document Version: v1.1
Submission Date: 28th August 2025

Platform Overview

This Food Delivery Platform is a comprehensive white-label solution designed for individual restaurants to manage their own branded food delivery operations. The platform facilitates direct food ordering and delivery services where restaurants can sell their menu items directly to customers through a dedicated mobile application while managing operations through a web-based dashboard.

The platform emphasizes operational efficiency with a streamlined three-role system: **Customers** place orders through mobile apps, **Drivers** handle deliveries using their mobile interface, and **Restaurants** manage the entire operation through a web dashboard. The solution eliminates third-party commission structures by providing restaurants with complete control over their delivery operations, pricing, and customer relationships.

Driver payments and settlements are handled offline between restaurants and drivers, allowing for flexible compensation arrangements. The platform supports multi-language functionality with professional Arabic translations and RTL testing, and can be customized with individual restaurant branding for white-label deployment.

The platform includes guest browsing capabilities and OTP-based registration to minimize signup friction while ensuring secure authentication. Advanced features like loyalty programs are planned for Phase 2 implementation.

User Roles

User Role	User Journey Brief
Customer	**Access app as guest or** download restaurant app → **Browse menu without login** → Register **with OTP verification or social login** → Browse menu **with advanced search and filters** → Customize orders **with clear icons and notes** → Add to cart **with promo codes and VAT display** → Select delivery/pickup **with ETA and scheduling** → Complete **one-page checkout with progress indicator** → Make payment **via multiple methods including Mada, Apple Pay, STC Pay** → Track order **with real-time GPS and driver contact** → Receive delivery → **Rate experience** → Access order history **with easy reorder**
Driver	Log in with restaurant-provided credentials → Set availability status → View assigned deliveries → Accept orders → Navigate to customer **with GPS tracking** → **Communicate with customers** → Confirm delivery → Update order status → **Report issues** → Receive customer ratings

Restaurant	Log in to the dashboard → Manage menu catalog **with nutrition/allergy information** → Set pricing and availability **with real-time control** → Process incoming orders → Assign drivers → Track deliveries **with live GPS** → Handle customer support → Generate sales reports → **Manage promotional campaigns and offers**

Key Features

CUSTOMER Features (Mobile App User Flow Sequence)

Feature Name	Feature Brief
User Registration & Authentication	Secure customer registration **with OTP verification** and social media integration (Google, Apple, Facebook) **or phone/email verification. Enable guest browsing before registration with minimized signup fields and an Arabic-friendly interface**
Menu Browse & Search	Browse restaurant menu by categories with **advanced** search functionality and filtering options (price, availability, dietary preferences) **with sorting capabilities, auto-suggest, and popular items section**
Product Details & Customization	Comprehensive menu item display with images, descriptions, pricing, **nutrition/allergy information,** and customization options **using clear icons and toggles** (size, toppings, special instructions) **with save favorites functionality**
Shopping Cart Management	Add/remove items, **update quantities with inline editing,** apply discount codes **and promo codes,** and view cart totals with **VAT calculations displayed upfront and upsell prompts [System suggests relevant add-ons ('Frequently ordered together') using predefined rules, with Phase 2 roadmap for AI-driven personalization.]**
Delivery & Pickup Options	**Toggle between** home delivery and pickup with scheduling options, **delivery time estimation (ETA),** address management, **and a branch map with curbside pickup options**

Streamlined Checkout Process	**One-page checkout flow with progress indicator,** delivery preferences, payment method selection, and **comprehensive** order summary **showing all fees clearly**
Payment Processing	Secure payment gateway integration for credit/debit cards, **Mada, Apple Pay, STC Pay,** and cash-on-delivery options through local payment gateways, **with quick selection and saved cards functionality**
Real-Time Order Tracking	Track order status from confirmation through preparation, pickup, and delivery with **live GPS updates, driver location on map, driver contact options,** and **push notifications**
Order History Management	Access complete order history, **easy reorder functionality using a dedicated reorder button,** and view **VAT-compliant receipts with highlighted favorite items.** **Customers can leave ratings and reviews for individual menu items, including comments, to build trust and transparency**
Exclusive Offers & Discounts	**Dedicated offers tab with one-tap apply functionality,** restaurant-specific promotional codes, special offers, and discount applications **with strong introductory offers and push integration**
Address Management	Save multiple delivery addresses **with map pin-drop functionality and labels,** set default locations, and **integrate with the official postal system for segmented, localized delivery**
Notification System	**Push notifications for order confirmations, status updates, promotional offers, and delivery alerts with user preference control, segmented and localized promotions, and rich push notifications**
Multi-Language Support	**Platform localization with professional Arabic translations, RTL testing, easy language toggle, and accurate translations for regional preferences**

Loyalty Features	**Basic loyalty program (introductory cashback/points system) included in MVP, with advanced tiered rewards planned in Phase 2.**

DRIVER Features (Mobile App User Flow Sequence)

Feature Name	Feature Brief
Driver Authentication & Profile	Login system using restaurant-provided credentials with basic profile management and document storage
Availability Management	Toggle availability status on/off for shift management and leave requests
Order Assignment System	View assigned delivery orders with complete details, including customer information and delivery instructions
Order Management Workflow	Accept/decline delivery requests, view order contents, and access customer contact information
GPS Navigation & Tracking	**Built-in navigation to customer locations with real-time location sharing to the restaurant and customers, live GPS tracking functionality**
Delivery Confirmation	Confirm successful deliveries
Customer Communication	**Direct call/message functionality to contact customers for delivery coordination and address clarification**
Issue Reporting	**Report delivery problems, customer unavailability, or order issues to restaurant management with a detailed reporting system**
Performance Tracking	View delivery statistics, completion rates, and customer ratings received
Support Communication	Direct communication channel with restaurant support for assistance and guidance

RESTAURANT Features (Web Dashboard User Flow Sequence)

Feature Name	Feature Brief
Admin Authentication & Dashboard	Secure restaurant login with a comprehensive control panel showing orders overview, sales metrics, and operational status
Menu Catalog Management	**Add, edit, and delete menu items with complete information, including images, descriptions, pricing, availability, and nutrition/allergy information**
Category & Organization Management	Create and manage hierarchical menu categories, subcategories, and menu item organization structure
Real-Time Order Processing	**View incoming orders, accept/reject requests, set preparation times, and manage order workflow with kitchen coordination**
Order Management System	Complete order lifecycle management from placement to delivery with status tracking and updates
Driver Management System	**Create driver accounts, assign deliveries, track driver locations with live GPS, and monitor driver performance**
Business Settings Configuration	Configure operating hours, delivery zones, minimum order amounts, delivery fees, and tax settings
Payment Management	Process payments, manage transactions, track payment status, and maintain financial records
Customer Account Management	Monitor customer registrations, view customer information, and manage the customer database
Marketing & Promotions	**Create discount codes, promotional campaigns with a dedicated promo engine, push notifications, and email marketing campaigns**
Sales Reporting & Analytics	**Generate detailed sales reports, customer analytics, popular items analysis, and driver performance metrics**

Customer Support Management	Handle customer inquiries, manage support requests, resolve issues, and maintain customer communication
Platform Configuration	Configure system settings, branding elements, notification preferences, and operational parameters
Menu Availability Control	**Real-time control over item availability, stock management, and menu item toggling**

Detailed User Flow Explanation

CUSTOMER USER FLOW

Customer Registration & Setup

1. Platform Access → Download restaurant-branded mobile application from App Store/Google Play **or access via web browser with guest browsing capability**
2. **Guest Browsing → Browse restaurant menu, view items and prices without registration requirement**
3. Customer Registration → Click "Sign Up" and choose registration method (**OTP verification, social media login via Google/Apple/Facebook, or email/phone with minimized signup fields**)
4. Account Details Entry → Input **essential** personal information and contact details **with an Arabic-friendly interface**
5. **OTP Verification Process → Complete SMS/email OTP verification for account security**
6. Profile Completion → Add delivery addresses **with map pin-drop functionality**, payment preferences, and dietary restrictions
7. Customer Homescreen Access → Access personalized customer homescreen with restaurant menu

Food Ordering Process

1. Menu Exploration → Browse restaurant menu by categories **with advanced search functionality, filtering options (price, availability, dietary preferences), sorting capabilities, and auto-suggest with popular items section**
2. Item Selection → Review detailed menu item information **with nutrition/allergy information**, ingredients, and **high-quality images**
3. Customization Setup → Select item variants **using clear icons and toggles** (size, toppings, spice level, special instructions) **with save favorites functionality**

4. Cart Management → Add selected items to cart **with inline editing capabilities**, modify quantities, apply discount codes **and promo codes**, view cart totals **with VAT calculations displayed upfront, and review upsell prompts**

5. Delivery Method Selection → **Toggle between** home delivery **and pickup with scheduling options, ETA display, and branch map with curbside pickup availability**

6. Address Confirmation → Select delivery address from saved locations **with labels** or add a new address **using map pin-drop functionality**

7. Order Review → Review complete order details, pricing, taxes, and delivery charges **with a comprehensive fee display**

8. Payment Processing → **Complete one-page checkout with progress indicator**, select payment method **including Mada, Apple Pay, STC Pay, use saved cards**, and process secure payment

Order Management & Delivery

1. Order Confirmation → Receive order confirmation with preparation and delivery time estimates **via push notifications**

2. Real-Time Tracking → Monitor order status from preparation through delivery **with live GPS updates, view driver location on a map, and access driver contact options**

3. **Driver Communication → Receive driver contact information and communicate directly for delivery coordination**

4. Delivery Coordination → Coordinate with the **driver** for delivery timing and location specifics

5. Order Receipt → Receive order at designated location with delivery confirmation

6. Rating & Feedback → Provide a **rating** for food quality, delivery experience, and driver service and **Customers can leave ratings and reviews for individual menu items, including comments, to build trust and transparency**

7. Order History Access → View past orders **with easy reorder functionality using a dedicated reorder button, access VAT-compliant receipts, and review highlighted favorite items**

8. Customer Support → Access support for any issues or inquiries about orders, **with the option to contact the restaurant directly**

9. **Loyalty Features: Basic loyalty program (introductory cashback/points system) included in MVP, with advanced tiered rewards planned in Phase 2.**

DRIVER USER FLOW

Driver Setup & Authentication

1. Driver Portal Access → Receive login credentials from restaurant management
2. Driver Authentication → Login using restaurant-provided username/ID and password
3. Edit Profile Setup → Edit driver profile with contact information and vehicle details (If required)
4. Availability Status → Set availability status
5. Driver App Access → Access personalized driver app

Delivery Operations Management

1. Availability Management → Set availability status (available/unavailable) and manage work schedule
2. Order Assignment → Receive delivery assignments with complete order and customer details
3. Order Acceptance → Accept or decline delivery requests based on availability and capacity
4. Order Preparation → Review order contents
5. Navigation Setup → Use GPS navigation **with real-time location sharing** to reach the customer location efficiently
6. **Customer Communication → Contact customers for delivery coordination and address clarification using direct call/message functionality**
7. Delivery Execution → Complete delivery
8. Status Updates → Update order status throughout the delivery process **for live GPS tracking**

Performance & Support Management

1. Performance Tracking → Monitor delivery statistics, completion rates, and customer ratings
2. **Issue Reporting → Report delivery problems, customer issues, or operational challenges using a detailed reporting system**
3. Support Communication → Access restaurant support for assistance and guidance
4. Payment Coordination → Coordinate with the restaurant for payment settlement and tip collection

RESTAURANT USER FLOW

Restaurant Setup & Configuration

1. Restaurant Portal Access → Secure login to the restaurant management dashboard
2. Business Profile Setup → Configure restaurant information, branding, and operational details
3. **Menu Catalog Creation → Set up a comprehensive menu with categories, items, pricing, and nutrition/allergy information**
4. Operational Settings → Configure operating hours, delivery zones, and service parameters
5. Payment Gateway Setup → Integrate payment processing systems and configure payment methods
6. Driver Team Setup → Create driver accounts and establish the delivery team structure

Menu & Inventory Management

1. Menu Structure Design → Create menu categories and subcategories organization
2. **Item Addition Process → Add menu items with detailed descriptions, images, specifications, and nutrition/allergy information**
3. Variant Configuration → Set up item variants (sizes, toppings, modifications) with individual pricing
4. Pricing Management → Configure item pricing, bulk discounts, and promotional pricing strategies
5. **Availability Control → Manage real-time item availability, stock levels, and menu item toggling**
6. Menu Updates → Regular updates to menu items, pricing, and seasonal offerings
7. Content Management → Manage item images, descriptions, and promotional content

Order Processing & Fulfillment

1. Order Reception → Receive incoming customer orders with detailed specifications and timing
2. Order Validation → Review order details, customer requirements, and kitchen capacity
3. Order Acceptance → Accept or reject orders based on availability and operational capacity
4. **Kitchen Coordination → Coordinate with kitchen staff for order preparation and timing**
5. **Driver Assignment → Assign delivery orders to available drivers based on location and capacity with live GPS tracking**
6. **Order Tracking → Monitor order progress from preparation through delivery completion with real-time updates**
7. Customer Communication → Handle customer inquiries and provide order updates

8. Quality Control → Ensure order accuracy and food quality before dispatch

Business Operations Management

1. **Driver Management → Oversee driver performance, scheduling, and delivery assignments with live GPS monitoring**
2. Customer Support → Handle customer complaints, feedback, and service inquiries
3. Payment Processing → Manage transaction processing, refunds, and financial reconciliation
4. **Marketing Campaigns → Create promotional offers, discount codes, and marketing initiatives using a dedicated promo engine**
5. Performance Analytics → Monitor sales performance, customer behavior, and operational metrics
6. Financial Reporting → Generate sales reports, revenue analysis, and assessment

Development Technology Stack

Component	Technology	Description
Mobile Frontend	React Native/Flutter	Cross-platform mobile development for iOS and Android customer and driver applications
Web Frontend	React.js	Modern JavaScript library for building a responsive restaurant dashboard interface
Backend Framework	Node.js	Server-side JavaScript runtime for building scalable food delivery APIs and services
Database	MongoDB / PostgreSQL	Database for storing customer data, orders, menu catalogs, and delivery information
Web Server	Express.js	Web framework for Node.js to handle HTTP requests, business logic, and API routing

Authentication	JWT (JSON Web Tokens)	Secure token-based authentication for multi-role access control
Payment Gateway	**Stripe / PayPal / Local Gateways (Mada, STC Pay, Apple Pay)**	**Payment processing with support for cards, local payment methods, and cash-on-delivery**
Real-Time Communication	Socket.io	**Real-time communication for order tracking, live GPS driver location, and instant updates**
File Storage	AWS S3 / Cloudinary	Cloud storage for menu images, delivery photos, and platform assets
Maps & Navigation	Google Maps API	**Location services, navigation, real-time GPS tracking, and delivery functionality**
Push Notifications	Firebase Cloud Messaging	**Cross-platform push notifications for orders, updates, promotions with user preference control**
API Architecture	RESTful APIs	Standard REST API design for communication between applications and the backend
State Management	Redux / Context API	Complex state management for React.js and React Native applications
Version Control	Git	Source code management and collaborative development
Hosting	AWS / Google Cloud / Azure	Enterprise-grade cloud hosting for scalability and reliability

Development Approach

Aspect	Description
Architecture Pattern	Microservices architecture with separate services for orders, payments, notifications, and user management
Development Methodology	Agile development with iterative releases and continuous integration/deployment
Code Organization	Component-based architecture with reusable UI components and modular backend services
API Design	RESTful APIs with comprehensive documentation and version control
Database Design	Optimized schema design for fast query performance and data integrity
Security Implementation	**Multi-layer security with data encryption, secure authentication, PCI compliance, and local regulation compliance**
Testing Strategy	**Comprehensive testing, including unit tests, integration tests, end-to-end testing, and Arabic/RTL interface testing**
Deployment	Containerized deployment with automated CI/CD pipeline and environment management

Important Notes (Feedback Implementation)

This proposal has been updated based on client feedback. All changes and enhancements are highlighted in **bold** throughout the document. Below is a comprehensive summary of implemented changes and considerations:

Authentication & User Access Enhancements

- **Guest browsing capability** - Users can browse the menu without registration requirements
- **OTP verification system** - Enhanced security through SMS/email verification
- **Social login integration** - Google, Apple, Facebook login options
- **Minimized signup fields** - Reduced friction in registration process
- **Arabic-friendly interface** - Culturally appropriate user experience

Menu & Search Functionality Improvements

- **Advanced search functionality** - Enhanced menu discovery capabilities
- **Auto-suggest feature** - Intelligent search recommendations
- **Popular items section** - Highlighting trending menu items
- **Sorting capabilities** - Multiple sorting options for menu browsing
- **Nutrition/allergy information** - Comprehensive product details for health-conscious users

Order Management & Customization

- **Clear icons and toggles** - Intuitive customization interface
- **Save favorites functionality** - Personalized user experience
- **Inline cart editing** - Seamless cart management
- **Promo codes integration** - Enhanced promotional capabilities
- **VAT calculations upfront** - Transparent pricing display
- **Upsell prompts** - Revenue optimization features

Delivery & Fulfillment Options

- **ETA display** - Real-time delivery time estimates
- **Scheduling options** - Advanced delivery planning
- **Branch mapping** - Store locator with visual representation

- **Curbside pickup** - Contactless pickup option
- **One-page checkout** - Streamlined payment process
- **Progress indicator** - Enhanced user experience during checkout

Payment & Financial Integration

- **Local payment methods** - Mada, Apple Pay, STC Pay integration
- **Saved cards functionality** - Convenient repeat purchases
- **Quick payment selection** - Optimized checkout flow
- **VAT-compliant receipts** - Regulatory compliance

Real-Time Tracking & Communication

- **Live GPS tracking** - Real-time order and driver location monitoring
- **Driver location on map** - Visual tracking interface
- **Driver contact options** - Direct communication capabilities
- **Push notifications** - Comprehensive notification system
- **User preference control** - Customizable notification settings

Order History & Loyalty Features

- **Easy reorder functionality** - One-click reordering with a dedicated button
- **Favorite items highlighting** - Personalized recommendations
- **Dedicated offers tab** - Centralized promotions access
- **One-tap offer application** - Simplified discount redemption
- **Strong introductory offers** - Customer acquisition strategy
- **Basic loyalty program (introductory cashback/points system) included in MVP, with advanced tiered rewards planned in Phase 2.**

Address & Location Management

- **Map pin-drop functionality** - Precise location selection
- **Address labels** - Organized address management
- **Official postal system integration** - Accurate delivery addressing
- **Segmented, localized delivery** - Region-specific service optimization

Language & Localization

- **Professional Arabic translations** - High-quality localization
- **RTL testing** - Right-to-left text support verification
- **Easy language toggle** - Seamless language switching
- **Regional preference support** - Culturally appropriate content

Driver Operations Enhancement

- **Real-time location sharing** - Enhanced GPS tracking capabilities
- **Direct customer communication** - Call/message functionality for coordination
- **Detailed reporting system** - Comprehensive issue reporting tools
- **Live GPS tracking updates** - Continuous location monitoring

Restaurant Management Improvements

- **Kitchen coordination** - Enhanced operational workflow
- **Live GPS driver monitoring** - Real-time delivery tracking
- **Dedicated promo engine** - Advanced marketing capabilities
- **Real-time menu availability control** - Dynamic inventory management

Technical & Security Upgrades

- **Local regulation compliance** - Saudi market regulatory adherence
- **Arabic/RTL interface testing** - Comprehensive language testing protocols
- **Enhanced GPS functionality** - Advanced location services integration
- **User preference management** - Personalized notification controls

Development & Deployment Considerations

- **Phase 2 planning** - Advanced features like loyalty programs scheduled for future release
- **Competitive parity focus** - Feature alignment with market leaders (Maestro, Herfy, Albaik)
- **Revenue optimization** - Features designed to increase conversion and retention
- **Scalable architecture** - Support for business growth and expansion
